PROFESSIONAL SUMMARY

Software Developer and Full Stack Developer with 5+ years of commercial software development experience building, maintaining and supporting bespoke web applications, internal systems, dashboards, CRM workflows and digital products. Strong experience with JavaScript and TypeScript, React and Next.js, PHP/Laravel, Node.js, C#/.NET, REST APIs, third-party integrations, authentication, SQL databases including PostgreSQL and MySQL, and cloud deployment using AWS, Docker and Vercel. Experienced in turning business requirements into practical digital solutions, working with designers and non-technical stakeholders, troubleshooting live systems, testing and debugging builds, and taking ownership from implementation through deployment and ongoing support.

TECHNICAL SKILLS

Frontend Development: JavaScript, TypeScript, React, Next.js, Vue.js, component-based user interfaces, HTML5, CSS3, Tailwind CSS, Vite, responsive development

Backend Development: PHP, Laravel, Node.js, C#, .NET, ASP.NET, Python, Eloquent ORM, MVC architecture, server-side development

APIs and Integrations: REST APIs, third-party integrations, API testing with Postman, CRM integrations, automated workflows

Databases and Security: PostgreSQL, MySQL, SQLite, SQL Server, relational database design, query optimisation, database migrations, user authentication, permissions, role-based access control, secure data handling, data integrity

Cloud, Deployment and Version Control: AWS, AWS Lightsail, Docker, Vercel, GitHub Actions, CI/CD pipelines, Git, branching, pull requests, code reviews

UI and Design Collaboration: Figma implementation, responsive interfaces, accessible web development, design-to-development workflows

Testing, Quality Assurance and Support: Quality assurance, unit testing, UAT, regression testing, debugging, root cause analysis, defect triage, live production support, performance optimisation

Software Engineering: Full-stack development, web application development, software development lifecycle, Agile, Scrum, technical documentation, maintainable code, development best practices, code standards, problem-solving

PROFESSIONAL EXPERIENCE

Software Developer

Payraydoo | Blythe Valley Park, Solihull

April 2026 - Present (6 months contract, on-site)

- Build and maintain full-stack fintech web applications and digital products using Next.js, TypeScript and Laravel/PHP, contributing to 3+ live production releases.
- Develop responsive, component-based user interfaces and translate Figma designs and wireframes into polished production-ready pages.
- Design, build and consume REST APIs and application integrations, connecting frontend functionality with backend services and PostgreSQL data.
- Manage user authentication-related application flows, database schema changes and controlled migrations with attention to secure data handling and data integrity.
- Deploy and maintain Docker-based application environments on AWS Lightsail and support Git-based CI/CD, updates, troubleshooting and ongoing production support.
- Collaborate with product stakeholders and engineers to scope requirements, recommend technical approaches, test and debug features, and take ownership through release.

Web Developer

Design Diagnosis | London, England

October 2025 - March 2026 (6 months contract, remote)

- Built and maintained bespoke Laravel/PHP web applications and dynamic websites, including content-management functionality that reduced reliance on developer support.

- Turned designer mockups into responsive, accessible and production-ready interfaces, working directly with designers and clients throughout delivery.
- Developed interactive web experiences and conversion-focused website improvements across desktop and mobile.
- Tested, debugged and resolved cross-browser and mobile production issues, improving page-load performance by approximately 25% through optimisation and caching.
- Maintained MySQL data and queries and supported technical updates, website maintenance and ongoing client delivery.

Software Developer

HAS Utility Ltd | London, England

April 2025 - September 2025 (6 months contract, remote)

- Developed and enhanced a bespoke full-stack CRM and internal business system using React, TypeScript, Vite, Laravel/PHP and MySQL.
- Built dashboards and workflow features supporting customer onboarding, lead management, supplier engagement, contracts and operational reporting.
- Developed REST APIs and third-party software integrations, including MaxContact CRM lead-data synchronisation and automated business workflows that reduced manual processing.
- Implemented and troubleshoot authentication, permissions, role-based workflows, API integrations, database migrations and secure handling of customer and contract data.
- Translated complex business processes into intuitive digital workflows and collaborated with technical and non-technical stakeholders through Git, pull requests and JIRA.

Senior Software Developer

HCL Technologies Limited | Chennai, India

August 2022 - January 2026

- Built, maintained and supported business-critical software across C#/.NET and C++ environments, delivering new features, integrations and production fixes.
- Led feature development and defect resolution across 5+ sprint cycles; introduced test suites achieving 95%+ coverage and reduced regression incidents by 30%.
- Built an internal reporting tool using WPF/MVVM with automated email generation, eliminating approximately 10 hours of manual administration per month and improving reporting and operational efficiency.
- Designed workflow integrations and automated deployment processes, reducing environment setup time by 35%.
- Implemented role-based access control, CRUD, input validation and audit logging for a .NET/SQL vehicle management system handling 1,000+ records.
- Participated in code reviews, technical documentation, root-cause analysis and knowledge sharing with distributed engineering and client teams.

Software Developer

HCL Technologies Limited | Chennai, India

August 2021 - July 2022

- Maintained live production modules processing 500+ print jobs daily and supported 99.5% uptime through troubleshooting and defect resolution.
- Developed new conversion, validation, image-transformation and automated submission features across 4 major releases, reducing job errors by 20%.
- Improved legacy workflows and deployment processes, increasing throughput by 30% and removing key production bottlenecks.
- Collaborated with UK and US teams in Agile sprints, contributing to 12 consecutive on-time sprint milestones.

EDUCATION

Bachelor of Information Technology

VELTECH University | Chennai, India

June 2017 - July 2021

CERTIFICATIONS AND AWARDS

C++ Programming Certification | .NET Development Certification | JavaScript Essentials 1 | JavaScript Essentials 2 | Python Essentials 1 | Python Essentials 2 | HCL Achievers Award - Shinwa FA Controls Project
